Appendix: Public Outreach, Presentations, Survey Results
Introduction

Project Background and Oversight

This Plan is a product of the Red Lodge Main Street Partnership through a Montana Main Street Program planning grant award under the Montana Department of Commerce. The City of Red Lodge administered the grant. The Red Lodge Main Street Partnership, coordinated by the Red Lodge Area Chamber of Commerce/Convention and Visitors Bureau, provided oversight of the project activities.

A grant award of $18,000 was supplemented by match donations to include:

- City of Red Lodge, $3,000
- Red Lodge Area Chamber of Commerce/Convention and Visitors Bureau, $1,000
- Red Lodge Area Merchants and Lodging Association, $500
- Beartooth Recreational Trails Association, $500
- Red Lodge Tourism Improvement Business District, $500
- Red Lodge Area Community Foundation/Old Roosevelt School, $500

The Red Lodge Main Street Partnership was accepted in January 2016 by the Montana Department of Commerce as an affiliate member community of the Montana Main Street Program. The Main Street Program assists communities in revitalizing and strengthening downtown commercial districts, while also offering technical assistance expertise and competitive grant funding.

A wayfinding program has been identified by the Red Lodge Main Street Partnership as a project that can be implemented successfully in a short period of time, providing further impetus and energy for the Partnership to successfully develop the longer term revitalization goals of developing historic commercial downtown preservation project proposals and updating the Downtown Red Lodge Assessment and Action Plan.
Wayfinding Plan Steering Committee

The Wayfinding Plan Steering Committee was made up of a partnership with a diverse membership of eight local organizations and multiple individual businesses.

Tracy Timmons  Red Lodge Area Community Foundation (RLACF)  
Bill Foisy  RLACF/Old Roosevelt Steering Committee*  
Tim Weamer  Red Lodge Area COC/Convention and Visitors Bureau*  
Sherry Weamer  Red Lodge Area COC/Convention and Visitors Bureau*  
Laurie Barnard  Beartooth Recreational Trails Association*  
Martha Brown  Red Lodge City Council  
Peter Italiano  Red Lodge Community Development Director  
Dan Seifert  Red Lodge Parks, Trees and Recreation Board*  
Kathy Robson  Red Lodge Merchants and Lodging Association*/Proud and Beautiful  
Trish Lacombe  Red Lodge Merchants and Lodging Association*  
Jenn Nelson  Red Lodge Tourism and Business Improvement District*  
Samantha Long  Carbon County Historical Society  
Sue Taylor  Beartooth Resource Conservation and Development Council  
Marcella Manuel  Red Lodge Realtors Association  
Sue Foisy  local merchant, Kids Corner  
Polly Richter  local merchant, Babcock and Miles  
Tom Kuntz  local merchant, Red Lodge Pizza Company  
Tom Kohley  Active Transportation Plan Steering Committee
Project Purpose and Description

Wayfinding is more than designing and installing distinctive, attractive signs and putting them in the right places. Wayfinding is about identifying the context of a place and leveraging its unique environment to move people to the place and through the place in a way that emphasizes its community character.

This Wayfinding Plan is a guide for the development and construction of signs in the City of Red Lodge, an outline of the intent for new sign design, and an implementation of larger branding and marketing efforts initiated recently. The plan will ultimately help to achieve goals set in the active transportation plan of higher connectivity to multiple modes transportation across the community, as well as promote linkages between trail networks, pedestrian and bike facilities, and assist travelers and tourists in their local trips and treks. Like a sign itself, this plan is a guiding document that focuses the energy of many recent efforts.

The Wayfinding Plan presents an outline of the public and stakeholder input received that determined sign design and placement specifications, present specifications for development and construction of new signs, prioritized locations for new signs, and estimated costs for sign projects. Preliminary mapping was performed to identify suitable locations for specific sign types and applications. To implement the plan, cost figures for sign projects and construction are estimated for prioritized projects.

Successful wayfinding and signage guides the energy of locals and tourists alike, to creates a sense of community that will provide regional benefits by increasing exposure to businesses, economic growth opportunities, alternative modes of transportation, and aesthetic benefits.

With a strong wayfinding and signage plan, Red Lodge will be placed on a bigger map for both locals and visitors alike.

How to Use This Plan

This plan will be utilized to implement the Wayfinding Plan in Red Lodge. Considering budget and changing conditions, the plan should be an evolving document which should undergo updates in subsequent years.

The necessary stakeholders will be utilized to revisit destinations list and reevaluate important routes visitors and residents ability and needs to navigate the City. A signage map was prepared to identify key locations of the signage around the City.

Capitalizing on rebranding efforts done recently, logos and branding have been included for fabricators to incorporate in new signs design and construction.
Public Outreach and Methodology

The Wayfinding Plan undertook a series of engaging, dynamic, and creative planning phases that has been called the **ASSESS, EXPLORE & APPLY** Framework:

**ASSESS**
The Assess component built on the momentum of recently completed efforts like the Chamber of Commerce rebranding, the efforts along Broadway supported by the Tourism Business Improvement District (TBID) and the City’s recently completed Active Transportation Plan. New design concepts were in concert with the already established downtown and community identity.

The project spanned more than just wayfinding—creating a positive influence on the economic vitality of the Red Lodge core area in the downtown was a key goal. Implementable strategies that were cost effective and flexible yet timeless also needed to build on the existing ‘Base Camp to the Beartooths’ campaign and the efforts of the TBID.

A Project Kickoff Meeting with the consultant team and project decision makers included City officials, the Red Lodge Community Foundation, the Chamber of Commerce, the Business Improvement District, Downtown Merchants Association, and others. This was concurrent with a walkabout that resulted in a visual/photo database and catalogue of the existing features particularly focusing on the streetscape and downtown features. Wayfinding strategies from existing documents were also reviewed including, but not limited to:

- Active Transportation Plan
- Growth Policy
- 2006 Downtown Red Lodge Assessment and Action Plan
- Parks Plans and Inventories
- ADA audits

**EXPLORE**
The Explore phase was rooted in a thorough understanding of the planning context by reviewing existing destination points in the community.

The Project Team prepared a Draft Survey Questionnaire for acquiring community input. This included social media, printed material and online surveys. An inventory was prepared and key destinations, attractions, and public spaces were prioritized. Project area maps were used to convey sign locations. The Team used base maps to create various overlays throughout the project including destinations, routes and connections, land use, accessibility, and site analysis. Individually selected business owners, key stakeholders and residents of the project area were contacted for interviews and results were synthesized with survey results.

**APPLY**
Designs were developed to focus on integration into the existing heritage and community identity. The Project Team drafted design concepts of imagery for the wayfinding elements that included a variety of sign types like gateway signs, directional signs, decorative elements, lighting, banners and custom designed furniture.

The Project Team then presented draft concepts to stakeholders for approval, ultimately preparing final design and construction specifications for up to 4 elements that will be construction ready. Finally cost estimates were developed, as well as a colors and finishes schedule and message schedule including message, quantity, and sign type for each feature as well as life cycle costs for maintenance. Included were additional funding sources for implementation.
Roadway Sign Specifications

All signs in the right-of-way must follow the Department of Transportation guidelines.

Fabricator Performance and Signage Material Requirements

PART 1 - GENERAL

1.1 These Fabricator Performance and Material Requirements are an integral part of the Design Intent documents. The fabricator, subcontractor and the general contractor are responsible for all aspects of fabrication identified in this document. Any exclusions or substitutions to this document or to the Design Intent Drawings must be stated in writing to the Red Lodge Chamber of Commerce (Owner) and to CTA Architects Engineers (CTA) at the time of bid.

1.2 Proprietary Information Non-disclosure Agreement

A. All ideas, designs, arrangements and plans indicated or presented by these drawings are owned by and are the property of the Owner, and were created, evolved and developed for use on and in connection with the specified project. None of such ideas, designs, arrangements or plans shall be used by or disclosed to any person, firm, or corporation for any purpose whatsoever without the written permission of CTA and the Owner. Any and all inquiries in this regard by outside parties should be referred to CTA. In addition, the fabricator must request and receive written approvals to use images of any completed element described in these documents in print or promotional materials of any kind including video, from both CTA and the Owner in order to proceed with publication. Permission to use images of the work for promotional or editorial purposes requires that the Fabricator be responsible for ensuring that credit indicating CTA as the designer be adjacent to those images. If an article in a publication accompanies the images, CTA must be identified as the designer in that article as well. The Owner may have additional requirements or restrictions for which the fabricator is also responsible.

B. All original artwork (including electronic files) furnished by CTA must be returned upon completion of this project.

C. The acceptance of these drawings by vendors, bidders, fabricators, or contractors and their agents constitutes agreement to the following conditions:

1.3 Design Intent Drawings

A. Design intent drawings are for the sole purpose of design intent only and not intended for construction purposes.

B. Resulting working drawings, show drawings and contract documents including permit documents are the sole responsibility of the contractor in every respect.

C. CTA shall review the shop drawings only for conformance with general design intent and will in no way be responsible or liable for any results of construction from working drawings, material selection, shop drawings, contract documents or any other agreements other than agreement with the Owner authorizing these documents.

D. Any Owner requested changes after this document has been completed will be considered additional services.

1.4 Quality Assurance

A. Quality Workmanship

1. The contractor shall be responsible for the quality and delivery of all materials and workmanship required for the execution of the contract including the materials and workmanship of any firms or individuals who act as his or her subcontractors with complete and up-to-date drawings, performance and material requirements, graphic schedule and other information issued by CTA.

B. Performance

1. The contractor shall base his or her proposal on the performance of all services, including
all items of labor, materials and equipment required for the complete fabrication and installation of the specified work within the time frame agreed to by contractor, Owner and CTA.

C. Dimensions

1. Written dimensions on the drawings shall take precedence over scaled dimensions. Contractor shall verify and be responsible for all dimensions and conditions shown by these drawings.

D. Sign Package Message Schedule

1. Copy, quantities and references shown on the Message Schedule shall take precedence over drawings. The large scale details shall take precedence over the smaller scale drawings.

E. Execution

1. Contractor shall notify the Owner and CTA of any discrepancies in the drawings or Message Schedule, in field dimensions or conditions, and/or changes required in construction details. Problems such as messages being too long to fit in to the required formats, difficulty accurately reproducing logo or logotype components, etc., must be brought to the attention of the Owner and CTA prior to execution. It is required that the contractor not resolve any discrepancies without consulting the Owner and CTA.

F. Contractor Recommendations

1. The contractor shall carefully study the detailed drawings and make specific recommendations for changes if those changes will improve the quality of any fabrication. Such recommendations and changes including any changes in contract amount shall be approved in writing by the Owner and CTA prior to preparation of shop drawings or fabrication.

G. Artwork

CD ROM with electronic artwork as required by the sign contractor for symbols or custom designed graphic components (i.e.: logos, logo types, arrows, or patterns) will be provided in Mac-based or Adobe Illustrator CS format at a scaled percentage of the final size. The to be? provided when necessary. All required copy layouts and text for project signage system is the responsibility of the sign contractor. All enlarging and reducing is the responsibility of the sign contractor. Contractor shall submit an itemized list of all required artwork at time of bid. Note: Any artwork required beyond electronic computer artwork noted above (i.e.: additional custom copy layouts, formatting for other platform(s), linotronic output, or copying to other media, etc.) will be billed to the contractor on a time and materials basis by CTA. CTA cannot provide copies of licensed fonts.

H. Testing

1. An independent testing lab will be hired by the Owner to do inspection and material testing as required. Do not proceed with the work until unsatisfactory conditions have been corrected by the contractor in a manner acceptable to the Owner.

I. Engineering Reports

1. A certified Independent Engineering report on materials and design for footing, signage support and sign fabrication are included with the design intent documents. As required by the MUTCD, Federal Highway Administration (FHWA) and Montana Department of Transportation (MDT). The footings, fabrication and attachment of the signs to support poles must all meet the required 90 mph wind load test.

1.5 Submittals

A. Shop Drawings

1. The contractor shall submit three sets of detailed shop drawings (2 sets of print, 1 reproducible set of plans, elevations and scale drawings) to CTA and 1 reproducible set plus 1 set of prints to the Owner for review prior to production. These drawings are to show/ indicate all materials, finishes, construction details, lighting requirements, installation details, artwork and structure, including locations of all material seams (finished and unfinished). Shop drawings and data shall be reviewed by the Owner and CTA with such promptness as to cause no delay in the work. The contractor shall make all corrections required and resubmit for final review. Final reviewed shop drawings noted “No Exceptions Taken” or “Exceptions as Noted” must be
received from the Owner before production starts.

2. Shop drawings will be reviewed for compliance with design intent only. The contractor is responsible for engineering each object to meet all load and wind requirements with accordance to FHWA & MDT specifications. The contractor is responsible for all other aspects of fabrication including engineering, procedure, installation techniques and performance as well as coordination with site conditions and related trades.

B. Product Data

1. The contractor shall submit manufacturer’s technical data and installation instructions for each fixture provided within the completed installed unit. Contractor shall provide identification of all materials used, including manufacturer’s descriptive literature, control number, name, code number, batch and formula (when available).

C. Specific Samples

1. The contractor shall submit a minimum of three (3) samples (minimum size 6” x 6” or as requested by CTA of each color and finish on the specified materials. Samples must be submitted in a time frame allowable for review, multiple adjustments, and approval without delay to the project. CTA’s review of samples will be for color, texture, and aesthetic compatibility with existing or adjacent materials. Compliance with all other requirements is the exclusive responsibility of the contractors. When specified furnish full-size samples of objects, partial objects, and/or materials. Resubmit samples if requested until required sheen, color, texture, and compliance with Fabricator Performance and Material Requirements is accepted.

D. Structure

1. Design of installation, internal structure, mounting assemblies and foundations are by contractor. Contractor shall submit three sets of prints and one reproducible set of comprehensive engineering drawings to CTA incorporating an adequate foundation and/or mounting structure for all sign components to meet all load and wind requirements and given site conditions. The contractor shall at his or her expense, submit for Owner’s review, calculations, sealed by certified engineers registered in the state of final installation, for all structural members including foundations.

E. Custom Fabricated Items

1. The contractor is to submit shop drawings of all custom fabricated items and specifications on all standard pre-manufactured items.

F. Maintenance

1. The contractor shall provide the Owner with complete finish/component care instructions as specified by the manufacturer for on-going cosmetic cleaning and maintenance. Three sets are to be submitted in an 8-1/2” x 11” 3-ring binder. Turn over to Owner one (1) unopened gallon of each color/finish used on the project clearly marked with complete specification and “P” color reference.

G. Copy/Text Layouts

1. The contractor shall provide full size copy layouts for all signs. Layouts must be submitted in a time frame allowable for review, multiple adjustments and approval without delay to the project.

1.6 Finishes

A. Colors and Surface Textures

1. All colors shall match exactly the color and finish requirements provided by CTA for exposed signage, materials with applied colors or other characteristics related to appearance, contractor shall provide color matches indicated, or if not indicated, as selected and reviewed by CTA.

B. Surface Preparation

1. All surfaces shall be thoroughly cleaned and free from dust, dirt, rust, scale, mill scale, oil, greasy materials or residue from cleaning. All coatings shall be applied in strict accordance with the manufacturer’s recommendations. All paint products shall conform to local codes. All finishes shall present a uniform opaque color appearance unless specifically indicated otherwise by CTA.

C. Painted Finish

1. Ferrous Surfaces
   a. Using Matthews paint products (or a
1. Materials

A. Acrylic Color Translucent Sheet

1. Where sheet material is indicated as a “color” provide color translucent sheet of density required to produce uniform brightness without halo-like effect. Material provided shall be appropriately matched to the intended permanent field conditions.

B. Acrylic/Transparent Sheet

1. Where sheet material is indicated as “clear” provide colorless sheet in gloss finish, with light transmittance of 92%, where tested in accordance with the requirements of ASTM D-1 103.

C. Type I Retroreflective Sheeting, known as Engineer Grade

1. ASTM D4956 classified Type I, also known as Engineer Grade, basic reflective sheeting. Sheeting must be used in all applications where reflective sheeting is indicated in the Design Intent documents. Contractor must provide two complete sets of color matched inks printed on 12”x12” samples of Type I (Engineer Grade) sheeting of all colors for approval by (one set to each) CTA and the Owner. Specific colors and areas to be covered per sign type are detailed in the Design Intent documents.

D. Aluminum Sheet

1. Provide aluminum sheet of alloy and temper recommended by the aluminum producer or finisher for the type of use and finish indicated and with not less than the strength and durability properties specified in ASTM B109 for 5005-H 15.

E. Aluminum Extrusions

1. Provide aluminum extrusions of alloy and temper recommended by the aluminum producer or finisher for the type of use and finish indicated and with not less than the strength and durability properties specified in ASTM B-221 for 6063-T5.

F. Structural Steel

1. Provide internal structural steel as required to meet the requirements of the permanent installation.

G. Fasteners

1. Unless otherwise indicated, provide concealed fasteners fabricated from metals that are non-corrosive to either the signage materials or the mounting surface.

H. Vinyl Machine-Cut Copy

1. Vinyl machine-cut copy shall be of 3M Scotchcal brand film or approved equal.

I. Paint

1. Paint shall be contractor’s highest grade for best ultraviolet light resistance, weatherability, and overall longevity of finish and color. Where possible, use water-based, 100% solids, high performance acrylic instead of solvent-based paints. If solvent-based paints

2. Aluminum

a. Using Matthews paint products (or a product of equivalent quality) finish with 1 coat 74-734 & 74-735 Metal Pretreat .25 mils DFT 1 coat Matthews Acrylic Polyurethane 1 mil DFT (min.). Observe designer’s specification regarding specularity (matte to gloss).

3. Bright Metals

a. Match finish (polished, satin, brushed, etc.) detailed on drawing. If specified, finish with a polyurethane clear coat warranted against yellowing for seven years.

4. Plastic Surfaces

a. All plastic to be paint finished according to paint manufacturer’s specifications.

5. Application

a. All applications of color/coatings are to be equal and of consistent cover with no streaking, spotting, gradation, or other variations within and from each similar application.

6. Ultra-Violet/Fading Protection

a. Contractor shall utilize materials, coatings, and processes to minimize as much as possible any noticeable fading of pigmented coatings.

1.7 Materials

A. Acrylic Color Translucent Sheet

1. Where sheet material is indicated as a “color” provide color translucent sheet of density required to produce uniform brightness without halo-like effect. Material provided shall be appropriately matched to the intended permanent field conditions.

B. Acrylic/Transparent Sheet

1. Where sheet material is indicated as “clear” provide colorless sheet in gloss finish, with light transmittance of 92%, where tested in accordance with the requirements of ASTM D-1 103.
must be used, use products that are low-VOC (<380 g/l) and <7% aromatic hydrocarbons by weight. Paint shall have a written warranty against premature fading and be approved by CTA prior to construction. Prior to close-out contractor shall turn over to the Owner 3 copies of complete paint schedule indicating all colors used.

1.8 Fabrication

A. Copy Application

1. Provide copy to comply with the requirements indicated for size, style, spacing, content, position, material, finish and color of letters, numbers, symbols and other graphic devices.

B. Signage/Cabinet

1. Details shown on the drawing shall be followed for exterior appearance. Structural design shall utilize unitized, self-supportive framing. Fabricate cabinet, exposed faces and graphic devices to size and style indicated and produce surfaces free from oil canning, warping, distortion or any irregularities or inconsistencies. Include internal bracing for stability and attachment of mounting accessories as required. Contractor may change interior construction shown on these details to conform to their shop practices. However these changes must be submitted as part of the shop drawings and be reviewed and accepted by CTA prior to fabrication.

C. Fastenings

1. Fasteners on all visible surfaces shall not be exposed, except where noted.

2. Surfaces shall not be penetrated during fabrication or installation, except where noted.

3. Surfaces shall not be deformed, distorted, or discolored by attachment of concealed fasteners.

4. All fasteners shall be resistant to oxidation or other corrosive action completely through their cross sections.

5. Work shall be secured with fasteners of the same metal, color and finish as the components they secure where they are exposed to view.

6. Fasteners shall be utilized in strict accordance with their manufacturer’s specifications, directions, recommendations, and as indicated on Design Intent Drawings.

D. Aluminum Sheet

1. Not less than 0.125” thick unless noted otherwise. Fabricate by the HELIARC or MIG welding process with all visible seams continuously welded, filled and ground smooth, unless the seam occurs along a color break. Then a clean butt joint with concealed backing channel and plug weld is finished to match surrounding material finish. All blinds, curves, and folds to be geometrically correct and produced by a consistent mechanical method unless approved otherwise by CTA.

E. Jointing and Brake Forming

1. All sheet metal shall have brake formed edges with radii not greater than sheet thickness unless otherwise specified. Adjacent stock shall have edges with similar radii.

F. Welding

1. All exposed welds are to be ground smooth and filled to match surface of adjacent material.

1.9 Installation

A. Contractor shall be responsible for determining the erection and dismantling of all barricade or protective coverings necessary to safeguard the public and property during the performance and duration of his or her work.

B. Contractor shall attaché objects to substrates in accordance with the project structural engineer’s and the manufacturer’s instructions unless otherwise shown. Install level, plumb, and at proper height. Repair or replace damaged units as directed by the Owner or CTA. Visible abrasions to finished surfaces must be repaired so that damage is not visible.

C. Installation of all items shall be by the contractor. Installation includes provision of any required footings, all anchor bolts, fastenings, attachment metals, and other miscellaneous metal items embedded in concrete or building wall material as required, and security of units in place with no visible fasteners.
D. The contractor will be responsible for any damage caused to building, site, and adjacent objects or elements during installation. The contractor shall be responsible for cleaning up all work areas upon the completion of their work, on a daily basis.

E. Contractor is responsible for compliance with all applicable environmental regulations.

F. Contractor is responsible for compliance with all OSHA regulations.

G. Contractor shall be responsible for coordination of all elements with the general contractor, other sub-contractors and trades people relative to this work. These coordination efforts will include, but not limited to: deliveries, work schedules, and installation. Storage space at the job site is limited and will also require coordination and/or approval. Materials or finished work stored at the job site without prior permission may be relocated at contractor’s expense.

1.10 Cleaning/Protection and Warranties

A. All items to be installed by the contractor shall be left in a clean and as-new condition. Upon completion of the installation, clean all soiled surfaces and touch up all finishes in accordance with the manufacturer’s instructions. All debris and packing material shall be removed and disposed of in a legal manner. The protective masking of the plastic surfaces shall be removed by the contractor upon completion of installation. All excavation and site work shall be returned to its original grade configuration after contract items are installed.

B. Finish Surfaces

1. All units shall be warranted in writing by the contractor for a period of no less than one year from the date of Owner acceptance. All finished (except large format computer output) are to be warranted for 3 years from the date of Owner acceptance. There shall be:
   a. No delamination of any portion of the object including vinyl graphics and copy.
   b. No cupping, warping, or dishing.
   c. No bubbling, crazing, chalking, rusting or other disintegration of surfaces, messages or edge finishes.
   d. No corrosion developing beneath the paint surface of the support systems, except as the result of obvious vandalism.
   e. No corrosion of the fasteners.
   f. No movement of objects from their foundations. The objects must remain true and plumb on their foundations, except when obvious postinstallation external damage has occurred.
   g. No fading of the colors when matched against a sample of the original color and material.
   h. No variation of any other performance stated by CTA on the drawings or in the Fabricator Performance and Material Requirement.

C. Structure/Components

1. Contractor shall provide Owner with 3 copies of the written warranty prior to installation guaranteeing to correct, to Owner’s satisfaction, at contractor’s sole expense, all defects in fabrication and installation of work for a period of one year after Owner’s acceptance of completed installation.

D. The contractor shall have total and complete responsibility for the security of all equipment, materials, and sign components until reviewed and accepted by the Owner.

E. Maintenance

1. The contractor shall provide to Owner 3 copies each of complete finish/component care instructions as specified by the manufacturer for on-going cosmetic cleaning and maintenance. These are to be submitted in an 8-1/2” x 11” 3-ring binder. Contractor to ensure signage, neon, lamps, and electrical components etc. are easily accessible for maintenance.

1.11 Permits

A. Securing and paying for all permits will be completed and in-hand prior to hiring contractor. Inspections and tests necessary for the construction and placement of all work required by the applicable governing agencies is by the contractor.

B. Contractor shall secure and pay for all insurance required by law including: Liability, Worker’s
Compensation, Comprehensive, Construction Liability, Personal Injury, Comprehensive Auto and Property on-and off-site.

C. Contractor shall not reveal or disseminate any information to any person(s), private or public, other than CTA, Owner or contractor’s personnel necessary to execute the contract without first contracting the Owner for permission.

1.12 Bid Notes

A. Original fabrication quotes shall be sent directly to the Owner with copies of all pricing information to be sent simultaneously to CTA and General Contractor.

B. Pricing shall be submitted in accordance with the bid documents.

C. Bidders are required to clearly indicate in writing within their bid the method of construction anticipated, the materials to be used, and any exclusions or exceptions to the bid documents.

END OF SECTION
Guide Sign Clearance and Mounting Details

**NOTICE:**

1. Place all signs at the clearance and mounting heights shown.
2. Ensure all signs are mounted on a single support post, unless otherwise specified.
3. Use appropriate hardware for mounting, including bolts, brackets, and anchors.
4. Ensure all signs are securely fastened to prevent movement.
5. Use suitable materials for mounting, such as stainless steel or aluminum.
6. Ensure signs are visible and legible from a distance.
7. Follow all applicable regulations and guidelines for sign placement and mounting.

**Guide Signs:**

*Complete assembly includes Items 1–5. Item 6, Anchors sold separately.

#### General Notes:

2. Break-Safe Model B525 is designed to fit WS (W1000mm) and WS (W2000mm) Wide Flange I-Beam, and 5" (127mm) and 8" (190mm) Square Tube signposts.

3. Hinge items 4 & 5 above are not used for single post sign applications.

4. All hardware items are American Standard sizes, galvanized in accordance with ASTM A153 (hot dipped) or ASTM B685 (mechanically applied).

5. Fasteners, except for special bolt and coupling, are installed with lockwashers, and do not have specific torque requirements. Fasteners should be secured as tight as possible with conventional wrenches, unless noted otherwise.

6. Square-up and level individual components, particularly Anchors to minimize the need for shimming between the Couplings and Anchors.

7. No more than two shims shall be placed under any one coupling. No more than three shims underneath any pair of couplings.

8. Refer to other side of page for complete installation instructions.
INSTALLATION INSTRUCTIONS

ANCHOR ASSEMBLY:

Note: Precise positioning of the anchor is critical to proper assembly of the system. It is recommended that actual posts be used to locate the correct position of the anchors.

1. Fabricate a flat, rigid template with four (4) 25mm (1") diameter holes located to match the specified anchor pattern of the Break-Safe Brackets attached to the signpost. See diagram below.

2. Attach four (4) Transpo Type B Female Anchors to the template using four (4) 25mm (1") diameter bolts. Ensure that each Anchor Washer is snug against the bottom of the template.

3. Lower Anchor Assembly into fresh concrete foundation, and vibrate into position such that the tops of the Anchor Washers are flush with the finished top surface of the foundation. Support the template such that all Anchors are level and in their proper locations.

4. Allow concrete to cure, and then remove the bolts and template from the top of the foundation.

HINGE ASSEMBLY: (for multiple Post Sign Applications)

1. Bolt upper and lower post sections together on a flat surface.

2. Drill eight (8) 20.5mm (13/16") holes in the flanges of the post sections as shown.

3. Place Hinge Plates on outer surface of the post flanges and secure with bolts, lock washers, and nuts. Ensure that upper and lower post sections are in alignment, and then tighten all nuts 1/2 turn beyond snug.

BRACKET ASSEMBLY:

1. Drill sixteen (16) 14.3mm (9/16") diameter holes in the flanges of the lower post section as shown.

2. Place Brackets squarely on outer surface of the post flanges, and secure with bolts, lock washers, nuts, and cap screws. Then, tighten all 1/2 turn beyond snug.

COUPLING ASSEMBLY:

1. Thread four (4) Break-Safe Couplings into Anchors. Do not tighten.

2. Suspend post assembly over foundation, insert Special Bolts through holes in the Brackets, and thread them snug into the Couplings.

3. If post is not plumb, insert Shims (14g and/or 18g) between the Couplings and Anchors, where needed.

4. Use lower wrench flats to tighten Couplings into Anchors as tight as possible using a conventional wrench. Do not use a pipe wrench. Couplings must be seated squarely.

5. Tighten Special Bolts while holding Couplings by the upper wrench flats with an additional wrench to prevent an induced torque stress across the necked portion of the Coupling. All Special Bolts shall also be tightened as tight as possible using conventional wrenches.

SIGN PANEL ASSEMBLY:

1. After all signposts are secured in place, attach sign panel assembly to posts in accordance with the sign manufacturer's recommendations.

RED LODGE WAYFINDING PLAN
Alluminum Sheet Panel Assembly Detail
Non-ROW Sign Specifications

**Glulam wood:**

Wood is to be kiln dried Alaskan cedar glulam beams and lap board. The cedar is resistant to decay and rot. Wood is to be charred and sanded for a smooth clean surface. One such manufacturer of charred wood finishes is

Montana Timber Products  
(406) 215-4961  
www.montanatimberproducts.com  
product: Charwood Tiger  
charred wood is to be clear coated with a vandal resistant finish for easy removal of marker and paint.

**Stone:**

Stone is to be thin stone veneer, approx. 1-2” thick. Stone is to be natural and not stained and dyed. The stone color may very based on the location in town, for example; downtown stone may be a sandstone to mimic the foundations of historic buildings, and stone on the top of Highway 308 may be selected to match the stone found naturally on the hillside.

Local suppliers that have stone availed for use:

SELECT STONE  
(888) 237-1000

product: Homestead Fieldstone Thin Veneer
Design Standards

All signs, both in and out of the right-of-way, must use the Red Lodge logo and adhere to Red Lodge Chamber of Commerce branding design standards.

Red Lodge Logo

All signs will have the Red Lodge logo, using the dimensions as shown.

Color Palette

Signs will use only primary colors: Pantone Black, Pantone Red, and White.

Font

All signs will use the font Uni Sans Heavy.
Sign Type

Small Roadway Directional

Signs will attach to existing historic lightposts, street light poles, or new DOT standard poles and will be placed just above the pedestrian zone. There are two types of small roadway directional signs, one using words and directional arrows, and the other using a larger graphic symbol placed above its description and directional arrow. See Sign Schedule for details on when to use small roadway directional signs and which type to use.
NOTES:
1. ALUMINUM PANEL SIGN SHEET THICKNESS TO BE .0125"

SMALL ROADWAY DIRECTIONAL
Large Roadway Directional

Large Roadway Directional signs use the same proportions as the Small Roadway Directional signs, except have larger dimensions. See Sign Schedule for details on which signs may be Large Roadway Directional signs.
NOTES:
1. ALUMINUM PANEL SIGN SHEET THICKNESS TO BE .0125”.
2. HINGE LINE TO BE 3” BELOW BOTTOM OF SIGN, PER MANUFACTURER’S INSTRUCTIONS.

LARGE ROADWAY DIRECTIONAL
Gateway

Signs will be located out of the right-of-way and in a location that has a picturesque backdrop of the Beartooth Mountains and Red Lodge.
NOTES:
1. ALUMINUM PANEL SIGN SHEET THICKNESS TO BE .0125”.
2. 3” CLEAR ON ALL REBAR.

GATEWAY
Pedestrian Directional

Signs will be located out of the highway right-of-way but on City side streets and at popular locations around Red Lodge.
PEDESTRIAN DIRECTIONAL

NOTES:
1. ALUMINUM PANEL SIGN SHEET THICKNESS TO BE .0125".
2. 3" CLEAR ON ALL REBAR
Information Kiosk

Signs will be located in primary locations visible to pedestrian traffic. The interpretive piece, as well as the events and happenings on the back, will be changed or updated as needed by the community.
NOTES:
1. ALUMINUM PANEL SIGN SHEET THICKNESS TO BE .0125".
2. 3" CLEAR ON ALL REBAR

INFORMATION KIOSK
Sign Map

General location map on the Information Kiosk.
Sign Icons
Sign Location

Signs in the right-of-way will be placed at strategic locations to direct traffic to important locations towards downtown Red Lodge and off the main streets.
# Sign Schedule

Each sign will contain the content and direction as labeled below. Sign locations must be approved by the Montana Department of Transportation if located within the street right-of-way.
